### What is sanity testing?

A **sanity test** or **sanity check** is a basic **test** to quickly evaluate whether a claim or the result of a calculation can possibly be true. It is a simple check to see if the produced material is rational (that the material's creator was thinking rationally, applying **sanity**).

A **sanity test** is a narrow regression **test** that focuses on one or a few areas of functionality. **Sanity testing** is usually narrow and deep. A **sanity test** is usually ...

### Sanity check

A sanity test or sanity check is a basic test to quickly evaluate whether a claim or the result of a calculation can possibly be true. It is a simple check to see if the produced material is rational (that the material's creator was thinking rationally, applying sanity). The point of a sanity test is to rule out certain classes of obviously false results, not to catch every possible error.
